

Vacancy: **R&D Engineer**

Location: **Lleida, Cataluña**

The role:

As an R&D engineer, you will create new, and refine existing, products and technologies through a process of researching, designing, experimenting, and testing. In this role you will initially be based on the Project site, working closely with the Operations team locally, as well as the Project Development & Engineering teams.

What you will be doing:

- Feedstock management
 - You will experiment with and analyse various feedstock combinations (manure, cops, etc.) with the aim to continuously improve the biogas production and quality.
- Project Development
 - As the focal point for subsidy and permit applications, you will work closely with the Project Development and Engineering teams to prepare high-quality reports, environmental impact assessments, and other relevant documentation that will facilitate obtaining the required project subsidies and permits.
 - You will engage with local communities, government agencies, and non-governmental organizations, to build relationships and address environmental concerns pro-actively.
 - You'll provide construction support, ensuring compliance with health, safety and environmental regulations.
- Product Development
 - You will work closely with the Engineering teams to create new and refine existing products and technologies that support our mission to slow down the pace of global warming. This includes but is not limited to biogas upgrading, ammonia stripping, methanation, etc.

Your Talent and Knowledge (that are key for this role):

- Degree in Chemical Engineering
- Minimum of 2 years' experience working in R&D environment
- A good understanding of AD/Biogas/Feedstock
- Strong communication skills (English/Spanish) both written and verbal
- Po-active team player with a can-do attitude and a passion for innovation and sustainability

What we offer:

- This is a great opportunity for you if you enjoy working in a dynamic and challenging environment that promotes autonomy and innovation.
- You will be collaborating across various teams, both national and international, sharing ideas and opinions.
- Working at the forefront of the circular economy movement means you will have a direct impact on slowing the pace of climate change.
